

Omni Cubed® S3 Slim Slab Saver™ (updated) Material Handling

PRODUCT DESCRIPTION

The S3 Slim Slab Saver™ is a versatile, completely customizable rigid frame and reinforcement system for handling large format slabs and other fragile materials. It is an ideal solution for transport and installation of LFTM (large format thin material), gauged or thin porcelain slabs such as Laminam®, and sintered stone such as Neolith® or Dekton®. This combination of solid machined clamps and extruded rails minimizes flexing and twisting of the material. The proprietary extruded aluminum rails are specially designed to be lightweight while retaining extreme strength and rigidity.

Non-marking 6" vacuum cups feature an ultra-concave design for fast attachment to bowed or leathered surfaces, and have a flexible triple seal for a secure, reliable hold. Cups, clamps, and rails can be arranged in any configuration for a variety of applications. Easy-grasp knobs enable quick repositioning of every component in this system. Vacuum release valves for fast and hassle-free removal of product.

Each clamp has an integrated "resting foot" that won't scratch finished surfaces or flooring when material is flipped upside-down. Adjustable leveling legs with resting feet are incorporated into handles to allow upright resting and leveling of the material. Durable, UV-resistant foam grips provide a comfortable handle for safer, more ergonomic transport and placement of materials.

The S3 auto models include a powerful yet compact "mega-pump" that has a built-in, rechargeable lithium-ion battery which provides worry-free vacuum pressure for up to 5 continuous hours on a single charge. Filtration systems in vacuum cups and pump help prevent dust and debris from impeding airflow and will prolong the life of the vacuum pump. Spring-loaded mounting pins hold the pump flush with the rail, so it doesn't interfere with vacuum cup placement.

Rails extend from 63" - 126" to accommodate material up to 118" (300 cm) in length. Rigid cross-braces are 36" or 60" (91 cm or 152 cm), depending on which model you are using. There are six slim slab saver models available, as well as numerous accessories and a-la-cart options, to build a truly customized system that suits your exact needs. See chart above.

PRODUCT HIGHLIGHTS

- Ideal for LFTM (large format thin material), gauged or thin porcelain slabs, and sintered stone
- Cups, clamps, and rails can be arranged in any configuration
- Lightweight with extreme strength and rigidity
- Non-marking 6" vacuum cups
- Integrated "resting feet" won't scratch finished surfaces
- Kickstand Kit accessory available for hands-free support (included with 3-Rail models)
- S3 Auto models include a powerful yet compact "mega-pump" for worry-free vacuum hold
- Rails extend from 61"–112" **63" - 126" (NEW IMPROVEMENT)**

Stock No.	Description	Includes:
350373	1-Rail Auto	<ul style="list-style-type: none"> • Adjustable rail • (4x) 6" vacuum cups with covers
350374	1-Rail Manual	<ul style="list-style-type: none"> • (AUTO) VMP750 rechargeable vacuum pump
350375	2-Rail Auto	<ul style="list-style-type: none"> • (2x) Adjustable rails • (2x) 3' Rigid Cross-Brace rails • (8x) 6" vacuum cups with covers • (2x) Regular handles • (2x) Handles with leveler legs • (4x) Rigid clamps with carrying case
350376	2-Rail Manual	<ul style="list-style-type: none"> • (AUTO) (2x) VMP750 rechargeable vacuum pumps
350377	3-Rail Auto	<ul style="list-style-type: none"> • (3x) Adjustable rails • (2x) 5' Rigid Cross-Brace rails • (2x) 3' Rigid Cross-Brace rails • Kickstand Kit • (12x) 6" vacuum cups with covers • (4x) Regular handles • (4x) Handles with leveler legs
350378	3-Rail Manual	<ul style="list-style-type: none"> • (6x) Rigid clamps with carrying case • (AUTO) (3x) VMP750 rechargeable vacuum pumps

Omni Cubed® S3 | Slim Slab Saver™ Material Handling

HORIZONTAL LIFTING HANDLE

The Horizontal Lifting Handle includes two handles that provide a comfortable gripping point at each end of any Omni Cubed reinforcement rail for more ergonomic lifting, moving, and tilting of LFTM (large format thin material), gauged or thin porcelain slabs, and sintered stone.

VACUUM CUPS WITH COVERS

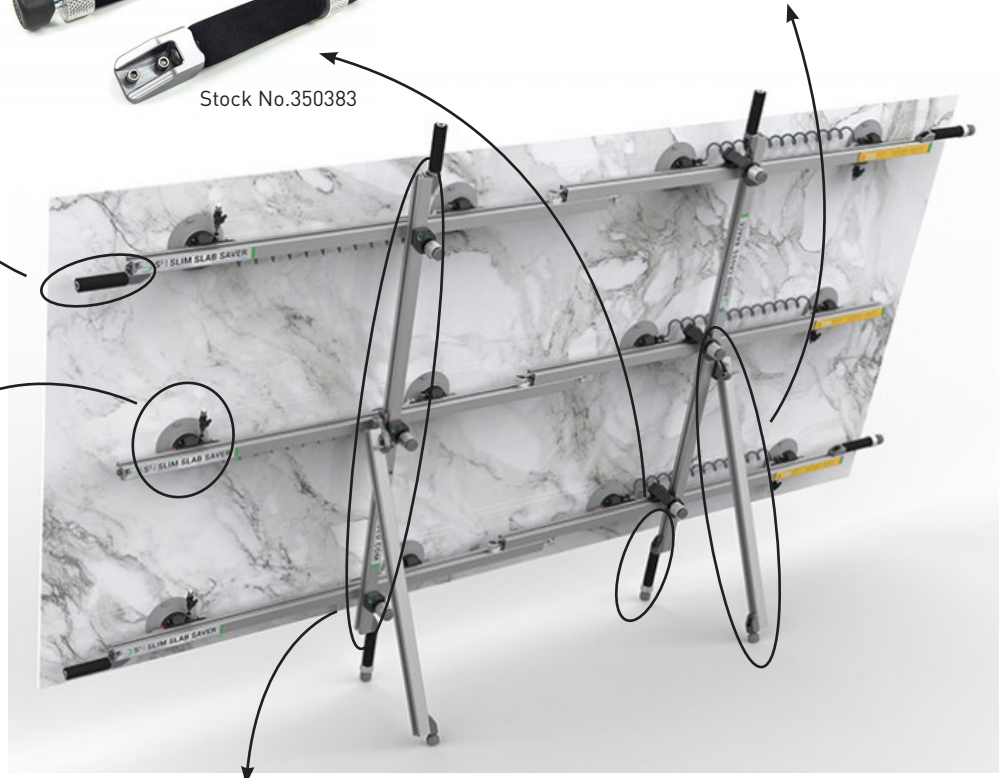

The non-marking 6" Cup Mount Assembly can be easily added to any Omni Cubed reinforcement rail. It features a concave design for fast attachment to bowed or leathered surfaces, and has FTS™ (flexible triple seal) technology provides a secure, reliable hold, even on textured or leathered materials. Integrated filters help prevent dust and debris from impeding airflow.

HORIZONTAL HANDLE WITH LEVELER LEG

The Horizontal Handle with Leveler Leg Kit includes two handles with adjustable leveling legs and incorporated PVC "resting feet" that won't scratch finished surfaces. These handles can be mounted at the ends of any Omni Cubed reinforcement rail to easily level pieces in an upright position for more accurate wall panel installations.

KICKSTAND KIT

The Kickstand Kit is a pair of kickstands (one left, one right) that can be used with Omni Cubed's Slim Slab Savers or vacuum cup Sink Hole Savers to allow upright resting of material for easier and more ergonomic application of mortar or adhesive. The integrated PVC "resting feet" won't scratch finished surfaces.

RIGID CROSS-BRACE WITH CLAMP

Rigid Cross-Brace Kits attach vacuum cup reinforcement rails perpendicular to each other at various locations, allowing customized configurations to reinforce large, fragile, or uniquely shaped pieces. These accessories are ideal for any situation where you need to minimize twisting and flexing of the material, as they create rigid joints which are sturdier than using unconnected rails. Each clamp's adjustment knob has an integrated "resting foot" that won't scratch finished surfaces or flooring when material is flipped upside-down.

The 3' Rigid Cross-Brace Kit includes two 3' cross-brace rails and four rigid clamps that attach any two Omni Cubed® vacuum cup material reinforcement rails to form a sturdy support frame for LFTM (large format thin material), islands, or fragile cutouts such as tub decks and fireplace surrounds. A convenient carrying bag for the clamps is included.

The 5' Rigid Cross-Brace Kit includes two 5' cross-brace rails and six rigid clamps that attach up to three Omni Cubed® vacuum cup material reinforcement rails, enabling installers to build even bigger rigid frames to support full-sized slabs of thin materials and other large pieces. A convenient carrying bag for the clamps is included.
