

**Pro**  
Series

Pristine work involves details. Many opportunities for an unclean project exist. Yet, ceramic razor blades contribute to a clean project in a few ways. Some of these include:

- Material is free from metal marks.
- Glue seams are free from oil bleeding into them.
- No rust discolorations.

Metal marks on stone and tile surfaces require additional clean up their use. Ceramic blades are non-metal and do not leave marks on the stone or tile. Furthermore, metal blades left on a surface in a damp or wet environment can rust and create a stain that must be removed with rust remover. Yet, ceramic blades do not rust so they won't leave rust stains on surfaces if left for a period of time. Finally, to prevent rusting, metal blades are oiled. This is great to keep the blades free of rust, but the oil can be transferred while cleaning seams. As a result, the oil can bleed into the glue and diminish the quality of the project.

#### **BENEFITS INCLUDE**

- Oil Free
- Rust Proof
- No Metal Marks

#### **SPECIFICS**

- 10 Blades Per Pack
- Stays Sharp for Long Life
- Easy to Clean With Acetone
- Hard Ceramic Material Won't Snap
