OTTOVAC is a portable electric vacuum lifting device intended to lift and move material that has a smooth, flat and non-porous surface. The OTTOVAC has a built-in pressure sensor with an automatic start/stop function. When the vacuum in the base of the suction cup reaches - 55 kPa, the pump will automatically stop after a three-second delay. When the vacuum level drops below -55 kPa, the pump will automatically restart, reaching the required pressure during operation.

- Fully electric, works on 4-AA batteries; no manual pumping required
- Reliability and Safety: Built-in pressure sensor with automatic start/stop function
- Maximum lifting capacity 200 kg (440 lbs)
- Works on textured services
- Red/Green LED indicator light for battery life
- Dependability: No longer be frustrated with the manual cups losing pressure and losing suction to your material. OTTOVAC takes the guesswork out of it.
